Magnesium Dies

CPS Resources Inc. magnesium dies are an inexpensive approach for achieving excellent results in hot stamping a wide variety of flexible substrates. Magnesium dies being metal, give an embossed look to a variety of hot stamping materials such as paper stock, label stock and flat plastic materials. They provide excellent heat transfer characteristics and durability. Using deep relief magnesium dies is an inexpensive approach for achieving outstanding embossed effects. Giving you the opportunity to match die-type, cost, and delivery with your production volumes.

Standard Dies

- Ideal for low volume production
- Flat surfaces
- Rubber thickness of 1/8"
- Inexpensive alternative to silicone
- Holes can be drilled and countersunk to your specifications
- Vertical hot stamping applications

Benefits

- Consistent die-to-die artwork placement
- Precision machined holes
- Reduced setup time
- Improved setup efficiency
- Increased productivity and reduced cost
- Custom die sizes and holes available per your drawing or sketch
- Our in-house graphic designers can assist with all artwork edit and manipulation
