Silicone Rubber Dies

Silicone rubber dies are excellent for hot stamping a variety of plastic materials such as abs, styrene, polypropylene, polyethylene, polycarbonates, etc., where sink marks and part variations are a problem. Silicone rubber conforms to surface variations and delivers a consistent, high-quality impression. We offer rubber dies in flat and contoured shapes for hot stamping on flat, contoured and cylindrical parts.

At CPS Resources Inc. we custom make your dies and hole placement to your specifications to help improve setup efficiency and increase productivity. Die changes become routine, as re-drilling the die mounting block will become unnecessary.

Standard Dies

- All durometers available
- Dual durometers also available
- Standard relief or deep relief molds available
- Rubber thickness of 1/8"
- Increased Productivity and Reduced Cost
- Aluminum thickness 1/32" to 3/4"
- 1/8" standard thickness
- Holes can be drilled and countersunk to your specifications

Benefits

- Consistent Die-to-Die artwork placement
- Precision machined holes
- Reduced set-up time
- Improved set-up efficiency
- Increased productivity and reduced cost
- Custom die sizes and holes available per your drawing or sketch
